

## Nokia GSM900 BTS Network Roll-out Project

Black Sea Region, Turkey

**Client**

Nokia

**Start Date**

October 2000

**Completion**

February 2001

**Assignment**

Construction Management

The project, located in Trabzon and Samsun cities in Black Sea Region and consists of 230 swap sites and 300 new sites in total.

The role mainly involves the replacement of present base Transceiver Station (BTS) Equipment with the Client's equipment at existing sites, also called swap sites and the roll-out of new BTS sites. This includes all activities, from the civil works and telecommunication implementation to the site integration, but excludes the network planning and acquisition activities.

Works carried out during 4-month period:

- 64 site sign offs were implemented and received for the sites already undertaken and completed by the Client's Management
- 27 swap sites and 2 new sites were completed in Trabzon Region
- 2 swap sites and 2 new sites were completed in Samsun Region
